GRAPHIC ERA HILL UNIVERSITY, DEHRADUN

Profiling Sheet

Q.1: Write your career objective.

To secure a challenging role as a Software Engineer where I can utilize my strong foundation in Data Structure and Algorithms and Java. My short term goal is to have hands on experience in the field of corporate world and long term goal is to architect scalable software solutions.

Q.2: Why do you want to be an engineer? Elaborate reasons.

I am driven by the ability to solve real-world problems through logic and code. I enjoy the process of breaking down complex issues into solvable components - skill that I have honed through practising DSA.

Q.3: Write about projects or internship you have done/ are doing along with the learning.

I have developed certain projects like Smart Travel Route Planner (C) using graph algorithms (Dijkstra's and Floyd Warshall), Pixel Alchemist (Python) - an image encryption and decryption tool using Hill Cipher technique, Airline Reservation Management System - currently developing a management system to handle bookings and user data, focusing on backend logic.

Q.4: What would you consider a significant achievement in your life and why?

Building my 'Smart Travel Route Planner' in C was a significant milestone. It required implementing complex graph algorithms from scratch. Getting it to work effectively gave me confidence to handle complex logic.

Q.5: Write about a failure of yours which you consider to share. What have you learned from it?

In class 12, I participated in debate competition after weeks of intense practise. During my speech, the pressure overwhelmed me; I blanked out completely, turned off my mic, and stood silent for a full minute. It felt like a disaster. However, I refused to walk off the stage. I took a deep breath, turned the mic back on, and finished my speech. I ended up winning the III rd prize, with judges noting I would have stayed calm and delivered my speech confidently. Now 1st prize if not for the freeze. I learned that failure is not falling down but refuse to get back up.

Q.6: What are your strengths? Write one or two instances where you have demonstrated your strengths.

My strengths are to never give up, always try my level best in every situation. I try to be the best version of myself and have the ability to keep improving myself. As discussed above, in that embarassing situation, I tried to keep my cool ~~and~~

Q.7: Write about your weaknesses. What are you doing to overcome your weaknesses?

I can be overly critical of my own work, often hesitating to submit a project because I feel the code isn't perfect yet. This sometimes slows down my learning process. To overcome this, I have adopted a mindset of building a basic working version first and then refining it, rather than aiming for perfection in the first attempt.

Q.8: What is the most difficult moment that you have faced in your life so far? What qualities helped you to overcome the moment?

Transitioning from the structured environment of school to the vast, open-ended curriculum of B.Tech was initially overwhelming. In my first year, balancing the pressure to maintain a high CGPA while adapting to complex new subjects felt impossible. There were moments I doubted if I could handle the engineering workload. My consistency and adaptability I realised I couldn't learn everything in a day.

Q.9: Apart from academics, what else are you interested in?

Make a separate list in terms of extracurricular activities, sports and any other interests.

I enjoy exploring logical puzzles and strategy-based games, which keeps my mind active. I also value socializing and organizing small events with friends, as I believe strong interpersonal connections are vital for a balanced life.

Technical: Coding in Java, solving algorithmic problems on Leetcode.

Social - Public speaking (Debate), participating in events
Listening to music, drawing and dancing.

Q.10: Give an example of an area, concept or thing that you are absolutely passionate about.

I am absolutely passionate about Backend logic and data structures. The moment when I optimise a piece of code to run faster or solve a complex problem using the right data structure gives me immense satisfaction.

Q.11: Describe yourself as an individual in 5 lines.

I am resilient and ambitious Computer Science student who believes in 'Smart Work'. I balance my academic responsibilities with my passion for my practical software development. I am a loyal friend, a logical thinker, and someone who treats failures - like my debate experience - as stepping stones to improvement.

Q.12: What kinds of people do you enjoy working with?

I enjoy working with people who are solution-oriented and communicative. I appreciate teammates who own their mistakes and focus on fixing them rather than shifting blame.

Q.13: What kinds of people you don't want to work with? What would you do if they became your senior in your dream job?

I find it difficult to work with individuals who are rigid or dismissive of others' ideas without discussion. A lack of transparency in a team is a major red flag for me. I would maintain a professional attitude. I would focus on delivering my work excellently and communicating to avoid misunderstandings.

Q.14: What do you expect from your first job? Prioritize and write in order.

Mentorship - An environment where I can learn industry best practices from experienced engineers.
Hands-on Development - Opportunities to write code that impacts real users.
Growth culture - A workplace that encourages learning new technologies.

Q.15: In the past year, what have you been dissatisfied about in your performance?

While my grades were excellent, I was dissatisfied with my practical application in certain theoretical subjects like Machine Learning. I felt I focused too much on scoring and not enough on the practical knowledge.

Q.16: Rate yourself out of 5 in verbal communication. What are you doing to improve your communication skills?

Rating : 3.5/5 After my experience in the debate competition where I froze, I have been actively working on this. I force myself to participate

In class discussions and explain my project logic to my friends to build confidence in articulating my thoughts under pressure.

Q.17: Who is your role model? What qualities of that person you would like to see in your personality and why?

My role model is my father. I admire his resilience and work ethic. He handles difficulties with a calm smile and never gives up on his responsibilities, no matter how tired he is. I want to develop that steadiness to remain calm and productive even when a project deadline is approaching or code is breaking.

Q.18: Write a few lines about your friends. Do you think they help/ may help you in achieving your goals? If yes, how? If no, why do you accompany them?

My friends are my support system. We share a healthy competition that pushes me to maintain my grades, but they also remind me to relax and laugh. Yes, they help me achieve my goals by providing a stress-free environment where I can recharge, ensuring I don't burn out.

Q.19: Write 3 leadership qualities. How many do you possess? Write an instance where you have applied those qualities.

(i) Empathy (ii) Decision-making (iii) Accountability

I believe I possess Empathy and Accountability. During my 'Smart Travel Route Planner' project, we hit a roadblock of GUI, cause nobody in our team knew about HTML/CSS to develop a GUI. Being a leader, I researched a library in C for GUI and decided to implement it in order to finish our work on time.

Q.20: So finally, tell us something more about yourself or introduce yourself.

Since childhood, I have been grinding hard to excel in academics, and therefore I am quite good at it. Apart from academics, I had participated in inter-school debate competitions, essay writing, art and crafts competitions, etc. In my mean time, I like to listen to music, draw and sketch.

i
